NEW

A GEOCOMPOSITE WITH ATTITUDE

Baltimore, MD – August 1, 2007 – “What makes a better geocomposite?” is the question that has led Tenax engineers to design a new geocomposite called Tenseal GM which combines impermeable containment of liquids, high-flow drainage, and filtration all in one product - a first-of-it's-kind. “It’s an integral system designed and manufactured as a true HDPE 40 mils liner incorporating a state of the art high flow 280 mils Triplanar composite and a filter textile ranging from 6 to 10 oz. available in 2 widths: 6.7 and 12.5 feet,” comments Aigen Zhao, PhD., Tenax’s vice president of engineering. Tenseal GM offers several advantages derived by lower installation cost without concern for slope stability in the traditional interface between a liner and the drainage composite now being an integral structure. Tenseal GM will be first launched in the USA market to meet the requirements of both closure and expansion applications in the typical 200 to 300 mils range.

ABOUT TENAX CORPORATION

Established in 1960 as a company specializing in the extrusion of thermoplastic polymers, Tenax is headquartered in Baltimore, Maryland where it provides geosynthetic solutions for a broad range of civil engineering needs: general, structural, geotechnical, transportation, environmental, hydraulic, and construction. With manufacturing plants in every region of the USA – from Maryland, Alabama, California, Canada, and Latin America, Tenax is able to respond to those needs in an efficient, timely and cost saving manner. Tenax’s parent company, based in Italy, is the rising star inside and outside of the European Union. Tenax has several other international headquarters in China, UK, Germany, and France.

Tenax engineers continue to create better geocomposites for a better world by advancing their knowledge, understanding and research on geocomposites. The addition of this new geocomposite, positions Tenax as the leader in the geocomposite drainage market.

CONTACT INFORMATION

To ensure that your next drainage product has the Tenax Tenseal GM, please call the Tenax technical office for further information: 1-800-356-8495.
