TENAX[®]

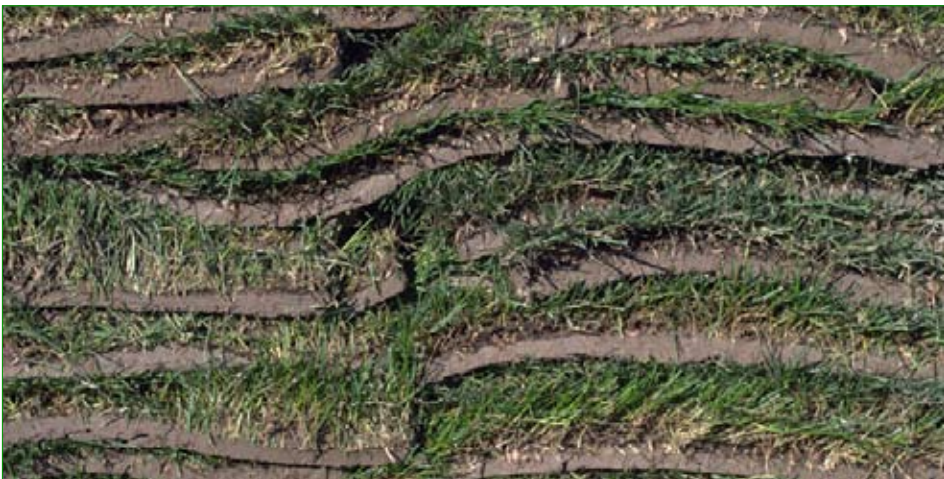

TENAX SOLUTIONS FOR AGRICULTURAL APPLICATIONS

Tenax offers a wide range of products for the agricultural industry. From netting to fencing, our products offer practical solutions to many problems faced by today's farmers, breeders, and homeowners, alike.

Tenax fence and nets are long lasting, highly visible, strong, economical, and low-maintenance. In addition, we offer a full range of metal alternative products. These products are often suitable for use in place of traditional chicken and welded wire.

Our customers can benefit from a product that has the look and feel of metal mesh but will not rust, corrode, or bend out of shape to create dangerous sharp edges.

Made of high density polyethelene or polypropylene plastics, our products are safe for use around livestock and are resistant to chemical agents. We offer products that are resistant to UV exposure, and other adverse climate conditions.

CROP & FLOWER SUPPORT

Tenax Hortonova is a strong, versatile polypropylene mesh specially designed for more efficient and economical cultivation of vegetables, fruits and flowers.

Due to its durability and practical nature, Tenax Hortonova is now being used by many agriculturalists and floriculturists. It is available in a variety of widths and mesh sizes and is easy to handle

and install. Tenax Hortonova fully satisfies the requirements for a variety of growing techniques, both vertical and horizontal.

The variety of sizes makes it ideal for either home gardeners or commercial growers. Climbing plants, such as gourds, zucchini, peas, beans, cucumbers, melons, etc. attach themselves to the mesh of Tenax Hortonova and can extend freely.

HORTONOVA

For Flower Cultivation:

Tenax Hortonova is highly recommended for flower cultivation due to its light weight and resistance to chemical agents. The netting is safe for fragile leaves and stems. It will not burn delicate plants as wire can. Tenax Hortonova will not promote growth of disease or bacteria.

For Growing Vegetables:

Climbing plants attach themselves easily to the Hortonova mesh and can extend freely. This trelling technique provides greater exposure to the sun and air. It also reduces ground contact and allows more efficient drainage of the plants; thus, eliminating the formation of microbiological growths (moss/fungus) and permitting better crop maturation. Space is used more efficiently allowing higher crop yields per square foot and easier cultivation. Tenax Hortonova also makes harvesting much easier by separating stems and allowing for "reach-thru" easy picking.

The use of Hortonova for plant support is ideal for both large and small-scale production. The product encourages the growth of flowers and contributes to the profitability.

DEER CONTROL

Tenax deer control fencing is the ideal alternative where welded wire has been the traditional solution. It's durability, ease of use, and other practical advantages make it a superior choice. Tenax deer control fencing offers maximum strength due to bi-oriented stretching. Our fencing comes in three different types of nets: Deer Net Folded, C-Flex, and our strongest fence, C-Flex P. Each, once installed as a fence with support posts, are effective against pesky deer. All fence and nets are UV stabilized to withstand outdoor sun exposure, and stay in peak condition even in severe weather. Tenax deer control fence and nets will not rust, rot or corrode, and will never need painting. They are effective and harmless alternatives to harmful poisons and useless scare tactics. The fence and nets guarantee optimal visibility and allow the transfer of natural light. There are no sharp edges, so the product will not cut your hands during installation.

DEER NET FOLDED

An economical net for enclosing small areas which need protection from deer damage. Deer Net is also ideal for seasonal protection when a fence is not needed year-round. It can be easily installed and removed and is reusable from year to year. It can also be used to cover plants or along the ground as deer deterrent. The product is folded in half for easy handling and merchandising.

DEER NET FOLDED				
PRODUCT CODE	SIZES	MESH	COLORS	ROLLS/PALLET
2A040006	7' x 100'	0.66" x 0.94"	black	20

C-FLEX

Once installed, C-flex is virtually invisible against your landscaping. The fence is recommended for areas which experience light to moderate deer traffic. Popular with both landscapers and professional installers, C-Flex can be used to enclose the perimeter of your property or smaller areas such as gardens.

C-FLEX

BIRD CONTROL

The greed of birds creates a problem for all producers of plants and flowers. These predators cause problems to buds and fruit on trees, and to seeds and seedlings in the ground.

a practical and reliable solution that is lightweight, yet strong, and will last for many seasons. It is easy to install and allows moisture, light, and air to permeate.

To protect crops from partial or total destruction, it is essential to install protection systems. Tenax bird net is the ideal system for protecting against bird damage since it offers

ORNEX SM/LM

Tenax Ornex is available in both small mesh (SM) and large mesh (LM) openings. This light weight net can be laid over the top of bushes and other low lying vegetation or on the tops of trees to prevent birds from preying on fruit and other crops.

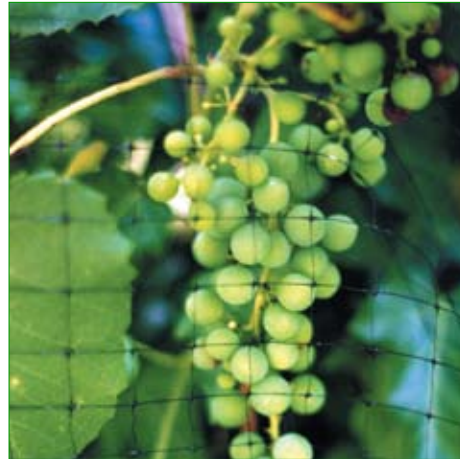

ORNEX SM

55260391	14' x 30'	.75" x .75"	black	10

Manufactured by the unique Tenax extrusion process, our nets are strong yet light-weight and will last for many seasons.

POULTRY FENCING & CAGING

Tenax poultry & caging fencing will not rust, rot or corrode. Because they are lightweight, yet rigid, they are faster and easier to install than wood and wire fencing. Also, there are no rough edges to injure you or your valuable livestock.

CINTOFLEX D/E/M

Light-weight, yet strong, our Cintoflex series products are available in a variety of different mesh sizes and roll widths. From perimeter fence to pond protection net, the uses for these products are limitless. Cintoflex will keep birds out of rafters when installed as barrier (type M is recommended for this application). It is also ideal for caging, runs, and around pens.

GROUND PROTECTION

GROUND PROTECTION GP

Once installed, GP keeps heavy farmyard vehicles such as tractors and trucks from damaging the grass. The grids are made from a heavy duty, extruded polymer that can withstand up to 8 tons per axle. It is also the ideal ground protection for livestock areas - especially for horses and ponies. GP can also be used inside barns when stacking hay to allow air to flow under the bales and keep them dry.

GROUND PROTECTION

PRODUCT CODE	SIZES	MESH	COLORS	ROLLS/PALLET
80003189	6.7' x 60'	.708" x .590"	green	4

Tenax GP is a heavy duty polymer grid for protecting and reinforcing grassed areas to be used by vehicles with an imposed loading up to 8 tons per axle.

TURF REINFORCEMENT TR

TR is an extruded polymer grid that can be used to reinforce grassed areas that experience light-weight vehicle (cars, light-duty farm equipment) traffic and heavy foot traffic. For best results, install TR when the grass is short, to reduce mud tracks around your barn, your house, on foot and buggy paths.

EROSION CONTROL/SOD NET

EROSION CONTROL

Erosion control on work sites and in finished projects is more than just important, it is essential. It is often a city, state, and federal requirement. Tenax helps meet these requirements with a variety of erosion control products for many applications.

RADIX

Radix gets its name from the Latin word for “root” – and for good reason. This product is specially designed to help vegetation establish an effective root base. Radix net is ideal for holding straw or hay mulch in place while vegetation is established.

RADIX

PRODUCT CODE	SIZES	MESH	COLORS	ROLLS/PALLET

31900700	3 x 100'	n/a	black	25

SILT FENCE

Nothing beats silt fence at preventing work site soil loss. A lightweight woven fabric allows fluids to pass through while trapping soil particles. Thus, preventing soil loss from the work site. Tenax silt fence comes pre-attached to posts, so no expensive machinery is required for installation.

SOD NET

Tenax offers two specially designed sod net products that encourage the production of both rolls turf and sod grass. Their particular net structure allows the grass root mass to intertwine with the mesh apertures to create a uniform mat.

Using Tenax Radix allows for the turf grass to be harvested thinner and lighter weight, yet the sods are just as robust. This can result in lower transportation cost and less handling. Waste is also reduced by significantly reducing the number of broken sods, even when using seeds with creeping roots.

75003070	46" x 12,000'	1.377" x .787"	clear	10

A2

Tenax A2 is a net with rectangular mesh manufactured from polypropylene. It is used during harvesting to wrap the turf in big and high-weighted rolls. The rolls, reinforced and protected by the net, get less damaged and loose less quantity of earth during transportation and installation.

TREE GUARDS

Young trees need protection in the early years of growth to ensure their survival against animals and mankind. In rural areas they are under attack from rabbits and deer that will feed on their shoots and strip and rub the bark from the stems and branches. Tenax plastic mesh tree guards are manufactured from chemical-resistant polyethylene which makes them extremely light, easy to carry and simple to erect and store. They are also very resilient and regain their shape after being knocked or pushed.

TG30

TG30 is a square shaped mesh for protection of young plants because it inhibits shoots from penetrating through the mesh resulting in damage by animals and it also offers protection from the wind. The large square mesh structure of TG30 makes it more stable and resistant to atmospheric elements.

TG30

SIZE	MESH	COLORS

Tenax plastic fencing products are affordable alternatives to metal nets and easier to install.

HOME & GARDEN

From balconies, gardens, to vegetable patches and aviaries, Tenax plastic meshes are designed for separating, protecting, decorating, and fencing. With our meshes, which are made from the highest quality plastics, it is not necessary to use welded wire, wire supports, and structures such as reeds and wood. Our mesh will not rot, rust, or corrode. They are strong and easy to install, and because they are U.V. treated, they provide long lasting, maintenance-free use.

RANCH 1

Ranch 1 is manufactured using Tenax bi-orientation technology (stretching of the mesh in both the longitudinal and transversal directions) to provide extra strength and rigidity. Ranch 1 fence is ideal for solving all temporary and permanent fencing problems on both farming and construction environments.

RANCH 1

PALLET WRAP NETTING

Tenax pallet wrap netting is made of light weight polypropylene with an open mesh structure, which allows produce to breathe. The open mesh will not interfere in the fumigation, cooling and ventilation processes, and makes inspection and stamping of goods easier. Tenax pallet netting can be applied quickly and easily by hand or machine. The net is pre-stretched,

making it resistant to tearing and will not lose its elasticity when stretched around packages. Due to a special production process of extrusion and stretching, the netting is highly resistant and conforms to any size package, even bulky items. It is easy to use and designed to fit most standard pallet wrapping machines.

TENAX ENVIRONMENTAL POLICY

TENAX CARES.

A Responsible Company

Tenax family of products tell one familiar story – we care about the environment. We strive to protect the quality and diversity of our environment by complying with all local, national and international standards, legislation and agreements regulating our activities. We realize how important natural resources are and are environmentally responsible – reducing, reusing and recycling materials of all kinds. All of our fences and nets are recyclable, and where possible are produced using post-consumer or

post industrial products. We strive to prevent pollution (including releases to the atmosphere, land or water) before it is produced, reduce the amount of waste generated at our facilities, and support pollution prevention by customers and distributors. We work heavily with responsible citizen organizations in the communities we serve, and promote reuse and recycling of our fences and nets by encouraging consumers to utilize Earth's 911, 1-800-CLEANUP, a resource which consumers can use to locate their

nearest recycling center. Tenax will not tolerate child labor, discrimination or the use of timber from intact natural forests. All timber used for Tenax products will come from certified forests. We acknowledge that FSC (Forest Stewardship Council) certified is the only current standard that meets the long-term aims of Tenax.

Our letterhead, business cards, and envelopes are all printed on paper that has 20% post-consumer recycled fiber

content and are printed with soy-based inks. In fact, all of our marketing and merchandising materials use media containing post-consumer recycled content and soy-based inks where possible. Tenax is also working towards becoming a paperless company, reducing paper by utilizing electronic sources such as email, CD ROM's and the internet instead of traditional printed materials. In fact, we invite you to explore our variety of products by viewing the Tenax catalog online at www.tenaxus.com. If you would like

for us to send you a CD ROM of our catalog, please call us at 1-800-356-8495 or e-mail your request to sales@tenax.com.

Continuous Improvement
Tenax continually seeks out and investigates alternative methods of manufacturing or acquiring our products. We will conduct our activities, including contracting with other business entities, in a resource-efficient manner. We will be selective in our choice of products, and processes. When more environmentally

sound methods are identified, we will move promptly – when economic circumstances allow – adapting these practices.

We believe that sound environmental policy contributes to our competitive strength and benefits our employees, the public, and the very home we all call planet Earth.

it's all our home.

ABOUT TENAX

Established in Italy in 1960 as a company specializing in the extrusion of thermoplastic polymers, TENAX has been the rising star with constant growth in production. Its corporate and organizational growth now places it as an International Group with a turnover of around \$100 million of which 40% comes from outside the European Union. TENAX has 500 staff working in production units, technical and sales departments and distribution centers which are responsible for contacts within the various markets. Its detailed attention to the development of markets has led the TENAX Group to

progressively extend its organization, favoring the establishment of numerous specialized production units. After the establishment of the original Italian headquarters in Viganò in the province of Lecco, the first company specializing in agricultural products was established in the province of Rieti, followed by a large production centers in Maryland and Alabama in the USA. A further seven subsidiaries located in strategic countries throughout the world complete this multi-national organization. The subsidiaries act as receiving centers for the geographical area under their responsibility in order

to implement the Group's 'know how' there and from where they benefit from operational autonomy for planning their development.
